

tl;dr: Go [here](#) for the databases.

DATABIN is a project by DOXBIN to help more and more people start abusing hacked databases & mining them for dox. DA ZONE used to serve this purpose, but Zoned is no longer in a position to maintain DA ZONE, so this site was born. Submissions are only accepted via email, and will be checked for quality before being added to DATABIN. The current list of databases available here is quite modest, but I'll be periodically adding new ones and submissions will be added. All files on this site will be compressed with [xz](#) and can be decompressed with either "unxz" or "xz -d" on Linux, or by downloading the binaries from [here](#) on Windows.

The easiest way to make sure you have everything is to run "usewithtor wget -cmk <http://databinhwin4xuxx.onion/dbs/>"

Want to submit something? E-mail me at Intangir@riseup.net and don't forget to use my [PGP key](#).

<http://databinhwin4xuxx.onion/>
